- Codeine
- Oxycodone
- Hydrocodone

Stimulants

- Nicotine
- Ecstasy/molly (MDMA)
- Cocaine
- Methamphetamine
- Medications for
Attention-Deficit
Hyperactivity Disorder (ADHD)

You're Not Alone: Understanding Substance Use and Finding Help

It may seem like many people your age are using substances like cannabis, alcohol, opioids, tobacco, vapes, stimulants and other drugs, but the reality is that most youth do not use drugs or alcohol.ⁱ Knowing this can make it easier to make good choices.

Those who do use substances are often trying to cope with stress, anxiety or sadness, or to keep up with the demands of school or work. It can also come from curiosity, wanting to fit in or simply having easy access. For those who have unstable home environments or have faced harmful experiences in childhood, the risk of substance use is often higher.ⁱⁱ

Using any medication that wasn't prescribed specifically for you can be dangerous. Drugs shared by friends or family members or purchased outside a pharmacy may contain unknown substances or may not be what they appear to be. This includes cannabis and pills, which may be fake or contain something unexpected.

It makes sense to have questions, especially if you're worried about yourself or a friend. Learning the facts and talking openly can help you make informed choices and support yourself or someone you care about.

Opioid Response*

This project is supported by Texas Targeted Opioid Response, a public health initiative operated by the Texas Health and Human Services Commission through federal funding from the Substance Abuse and Mental Health Services Administration grant award.

Ways to Support Yourself or Your Friends

Taking care of yourself matters. It helps you manage stress, pressure, and difficult emotions that might make substance use feel like an easy way to cope. Try building healthy habits like getting enough sleep, eating regular meals, staying active, and spending time with people who support you. Talking with someone you trust can also help you sort through what you're experiencing and figure out what kind of support you may need.

If you're worried about a friend, reach out and let them know they're not alone. You don't need to have all the answers. Sometimes just listening helps more than you may realize. Encourage them to talk with a counselor, health care provider or another trusted adult who can help.

Learn more about substance use and how to help support someone you care about or get support for yourself.
